Assignment updates on errors, omissions and additional information

Error in UML for Card : 4th May

The definition of CompareTo(Card) should have been

+CompareTo(Card): int

which returns negative value if this card is less than card (parameter); returns 0 if both are equal and returns a positive value if this card is greater than the parameter card.

For this assignment; we will compare primarily by Suit and if necessary by Facevalue in ascending order as defined by the respective enumeration types.
